The information presented in this catalog does not form part of any quotation or contract, is believed to be accurate and reliable and may be changed without notice. No liability will be accepted by ASM for any consequence of its use. Publication thereof does not convey nor imply any license under patent or industrial or intellectual property rights.

Applications that are described herein for any of these products are for illustrative purpose only. ASM makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Magnetic measuring scale and free floating unguided sensor head

For direct adhesive taping – the cost-effective mounting method

Magnetic measuring scale in flat profile and unguided sensor head

Easy to mount.
Adjustment on site possible.
Can be stacked by 3 m units up to 30 m length.

Magnetic measuring scale in guidance profile and guided sensor head

Provides integral linear guidance for applications without own linear guidance by system

Magnetic pole wheels
POSIMAG-ROT

Pole wheels with different diameters are available for angular and/or revolution measurement.

The company and the products

ASM has played an active role in the manufacture of position sensors for 25 years.

In order to solve all kinds of linear and angular measurement tasks in industry and research, ASM currently offers three different types of positional sensor technology:

- **POSIMAG®**

Magnetic measuring scale with MR sensor head.

Thanks to its special properties, POSIMAG® is ideal for many industrial applications in the production of machinery, plants and precision equipment as well as research. POSIMAG® is suitable for linear, angular and speed measurements. The magnetic scale can also be applied to uneven surfaces.

- **POSICHRON®**

Magnetostrictive principle (Time of Flight).

The areas of application for POSICHRON® positional sensors are wide and varied. They are used in e.g. injection-moulding equipment, dosing and mixing systems, die-casting machines, road vehicle tests, tunnel-boring equipment, wind power plants, patient beds, hydraulic cylinders and presses, fill-level measuring equipment etc.

- **WS**

Cable actuated position sensors.

WS position sensors ensure reliable operation in many sectors of automation, process engineering, industry and research, e.g. in handling systems, circular saws, printing presses, aircraft testing, automobile testing, elevator technology, conveyor belt technology, warehousing technology, local transportation vehicles, tunnel-boring machinery, wind power plants, rehabilitation technology, medical engineering, patient beds, etc.

ASM Position Sensors offer superlative quality and precision. Ongoing research and development in our laboratories, coupled with comprehensive quality management, facilitate and safeguard these high standards.

Position Sensors from ASM are used wherever path, distance, position or length measurements need to be automated, checked, tested or monitored. The customer base includes users from all sectors of government, industry and research.

With around 80 employees at its headquarters in Moosinning near Munich, the company manufactures both standard products and customised, specialist solutions. Thanks to the sales offices in Great Britain, Germany, France and a worldwide network of representatives, sales engineers for ASM products are never far away and will be delighted to demonstrate ASM's range of position sensors at customer premises.

POSIMAG® – the functional principle

POSIMAG® is a contact-free, high-resolution magnetic position measuring system for measuring lengths of up to approx. 30 metres. Because of its sturdiness and resistance to dirt, together with the system's exceptional resistance to wear and tear, POSIMAG® is also suitable for use under challenging environmental conditions.

POSIMAG® consists of a magnetoresistive (MR) scanning head, and a magnetic measuring scale that consists of a flexible steel strip with a magnetic carrier layer laminated on top. This is magnetised at regular intervals with magnetic north and south poles. The measuring scale can be fastened in position using special adhesive fixing strip or also using pre-produced assembly rails with fastening straps. To protect against external mechanical influences, the magnetic scale has a covering laminate layer made from a thin, stainless steel strip.

To capture a position, the magnetoresistive (MR) sensor head samples sinusoidal magnetic fields above the magnetic measuring scale in such a way that the process is contact-free and avoids wear and tear. The distance of the MR sensor head to the surface of the magnetic scale can be up to 2 mm in the case of a scale with a 5 mm magnetic spacing. The sine-cosine signals generated in the sensor head, which are displaced by 90°, are output without any time delay as RS422-compatible impulse signals via the integrated interpolation electronics working in conjunction with the reference signal. Resolutions of up to 5 µm are available as standard. The signals can then be processed by all common industrial control units with suitable signal processing speeds, or displayed directly using a digital display unit from ASM's PRODIS series.

Technical advantages:

- Sturdy construction
- Contact-free and wear-free
- Shielded metal housing
- Resistant to dirt
- Protection category up to IP67
- Simple assembly and adjustment
- Signal processing as standard with encoders
- Distance between the MR sensor head and the magnetic scale up to 2 mm
- Reference and terminal position signals
- Measuring lengths of up to 30,000 mm (up to 50 m on request)

PMIS3 POSIMAG[®] Magnetic Scale Position Sensor

Very compact sensor for industrial applications Sensor head PMIS3

- Non-contact, no wear
- High velocity
- Robust shielded metal enclosure
- Protection class IP67
- Incremental encoder output A/B/Z
- Signal processing as usual with encoders
- Reference pulse and end position signal
- Indicator for velocity/position errors

A POSIMAG measuring system consists of the sensor head PMIS3 and the magnetic scale PMIB3 with the same magnetic period.

Specifications	Output							
		Incremental encoder output A/B with differential push-pull output, TTL/RS422 or HTL compatible						
Excitation voltage	10 ... 30 VDC or 5 VDC ±5 %							
Excitation current	50 mA to 300 mA, depending on pulse frequency, cable length and load							
Magnetic period of the sensor	2 mm	5 mm						
Guided spacing between sensor and mag. scale (x ₂)	0.1 ... 0.8 mm	0.1 ... 2 mm						
Side tracking tolerance of the sensor	±1 mm	±1 mm						
Linearity (sensor with mag. scale PMIB3)	15 µm ± 40 µm/m	30 µm ± 40 µm/m						
Repeatability	± 1 digit							
Resolution with ext. times 4 counting mode [µm]	5	10	20	50	10	25	50	125
Max. velocity with fp=50 kHz [m/s] (20 kHz: x 0.4; 10 kHz: x 0.2)	0.8	1.6	3.2	8	1.6	4	8	20

Order code PMIS3

Model name

Magnetic period

20 = 2 mm / 50 = 5 mm

Resolution (in µm) with times 4 counting mode

Mag. period 2 mm: 5 / 10 / 20 / 50

Mag. period 5 mm: 10 / 25 / 50 / 125

Max. pulse frequency (in kHz, standard 50 kHz)

50 / 20 / 10

Output

HTL = HTL output with excitation 24 VDC, output 24 V

TTL = TTL output with excitation 5 VDC, output TTL/RS422

TTL24V = TTL output with excitation 24 VDC, output TTL/10 mA

Reference pulse/ end position signal/ status signal

Z0 = A/B w/o reference pulse / Z1 = A/B with reference pulse Z

Z2 = A/B with end position signal / *Z3 = A/B with reference pulse

and status signal

(Option Z3 only for non-differential output, single ended)

Cable length (in m, standard 2 m)

Connection

S = Cable output, open end

P / SD15 = SUB-D connector at the cable end: P = 9 pins; SD15 = 15 pins

Order example: PMIS3 - 50 - 25 - 50KHZ - HTL - Z1 - 2M - S

PMIS3 POSIMAG[®] Magnetic Scale Position Sensor

Specifications (continued)	Max. pulse frequency f_p	50 kHz, 20 kHz, 10 kHz (standard 50 kHz)
	Outputs	A, \bar{A} , B, \bar{B} , reference pulse Z, \bar{Z} , end position signal E, \bar{E} , status signal ERR
	Material of enclosure	Zinc die casting
	Electrical connection	Cable 8 wire, \varnothing 5 mm, open cable end, 9 pin SUB-D connector at the cable end as option. Max. length of the integrated sensor cable for TTL: 3 m; HTL/TTL24V: 20 m
	Weight (w/o cable and connector)	30 \pm 5 g
	Protection class (EN 60529)	IP67
	Environmental	
	EMC	DIN EN 61326
	Temperature	-40 ... +85°C

The subsequent counting device must be able to process the specified maximum pulse frequency of the sensor.

Output signals	Saturation voltage	U _H , U _L = 0,2 V U _H , U _L = 0,4 V C _{last} < 10 nF	I _{out} = \pm 10 mA (U _H = U _B - U _{out}) I _{out} = \pm 30 mA
	Short circuit current	ISL, ISH < 800 mA ISL, ISH < 90 mA	(U _H , U _L = 0 V) (U _H , U _L = 1,5 V)
	Rise time	t _r , t _f < 200 ns	with cable length 1 m, 10 % ... 90 %

Pulse frequency in dependence on the cable length	Load/cable length	Load/pulse frequency f_p		
		HTL single ended UB = 24 V	TTL/RS422 differential UB = 5 V *	TTL/24 V UB = 24 V
	Max. output current	50 mA	50 mA	10 mA
	R _{last} min.	500 Ω	100 Ω	500 Ω
	C _{last} max.	10 nF	10 nF	1 nF
	200 m	15 kHz	—	—
	100 m	25 kHz	100 kHz	—
	50 m	50 kHz	200 kHz	50 kHz
	10 m	100 kHz	300 kHz	100 kHz

* = consider the voltage loss of the cable; the excitation voltage 5 V \pm 5% of the sensor must be guaranteed.

Note: For longer distances (see specification above) you must use min. 0,5 mm² wire for „Excitation+“ and „Excitation GND“ (see signal wiring next page), all signal wires must be min. 0,14 mm²!

Outline drawing

PMIS3 POSIMAG[®] Magnetic Scale Position Sensor

Output signals

Option Z1 (Reference pulse)

Option Z2 (End position signal)

Signal wiring / connection	Signal name					Open cable end Cable colour	Conn. SUB-D, 9 pin pin no.

PMIB3 POSIMAG[®] Magnetic Scale

Magnetic scale PMIB3 for Position Sensor PMIS3

- **Easy splicing**
- **Resistant to moisture and many fluids**
- **Extensive ruggedness against dust etc.**

The magnetic material is magnetised in defined and even distances and works as a solid measure. Reference marks can be user defined in 4 mm resp. 10 mm steps. The magnetic scale retains its firmness by means of a spring steel base (standard steel strip CK 85).

Specifications		Solid measure	
		Plastic bonded flexible permanent magnet	
Base material		Spring steel CK 85	
Masking tape		Stainless steel (non magnetic)	
Measurement ranges		e.g. 100 ... 2500 mm (up to 50 m on request)	
Width		10 mm +0.1 mm / -0.2 mm	
Thickness (with masking tape)		1.7 mm ±0.1 mm	
Magnetic period		2 mm	5 mm
Linearity at 25°C	up to 30 m	±40 µm/m	±40 µm/m
	up to 50 m	±80 µm/m	±80 µm/m
Reference mark (reference pulse)		max. every 4 mm	max. every 10 mm
Measurement range		must be divisible by 4	must be divisible by 10
Linear thermal expansion coefficient		11 x 10 ⁻⁶ / K	
Operating temperature		-40 ... +70°C	

An unmagnetic masking tape made of stainless steel is available (accessories). The magnetic scale is flexible and can be glued to the surface of a cylinder with a minimum radius of 100 mm and used for angular measurements.

Order code PMIB3

Model name

Magnetic period

20 = 2 mm / 50 = 5 mm

Mounting of the magnetic scale

N = adhesive taping

Measurement range (total length = range + X mm, refer to the table on page 12)

e.g. 100, 500, 1000 ... 2500 mm (up to 50 m on request)

Measurement ranges must be divisible by 4 (resp. by 10)

Reference marks/end position marks (optional)

R1 = reference mark on the left / R2 = on the right

E1 = end position mark on the left / E2 = on the right

Additional reference marks every 4 mm (period 2 mm) resp. 10 mm (period 5 mm) from the left

Options

FP = magnetic scale in flat profile

HP = magnetic scale in high profile

AB = Masking tape (only with FP or HP)

Order example: PMIB3 - 50 - N - 1500 - R1

PMIB3-ST POSIMAG[®] Magnetic Scale

Magnetic scale PMIB3-ST for Position Sensor PMIS3

- Easy splicing
- Resistant to moisture and many fluids
- Extensive ruggedness against dust, chipping etc.
- Magnetic scale with stainless steel base

The magnetic material is magnetised in defined and even distances and works as a solid measure. Reference marks can be user defined in 4 mm resp. 10 mm steps. The magnetic scale retains its firmness by means of a spring steel base (stainless steel strip CrNi 17 7).

Specifications		Plastic bounded flexible permanent magnet	
		Solid measure	Plastic bounded flexible permanent magnet
Base material	Stainless steel CrNi 17 7 / PE		
Masking tape	Stainless steel (non magnetic)		
Measurement ranges	e.g. 100 ... 2500 mm (up to 50 m on request)		
Width	10 mm +0.1 mm / -0.2 mm		
Thickness (with masking tape)	1.7 mm ±0.1 mm		
Magnetic period	2 mm	5 mm	
Linearity at 25°C	up to 30 m	±40 µm/m	±40 µm/m
	up to 50 m	±80 µm/m	±80 µm/m
Reference mark (zero pulse)	max. every 4 mm	max. every 10 mm	
Measurement range	must be divisible by 4	must be divisible by 10	
Linear thermal expansion coefficient	11 x 10 ⁻⁶ / K		
Operation temperature	-40 ... +70°C		

An unmagnetic masking tape made of stainless steel is available (accessories). The magnetic scale is flexible and can be glued to the surface of a cylinder with a minimum radius of 100 mm and used for angular measurements.

Order code PMIB3-ST

Model name

Magnetic period

20 = 2 mm / 50 = 5 mm

Order example: PMIB3-ST - 50 - N - 1500 - R1

PMIB3-HT POSIMAG[®] Magnetic Scale

Magnetic scale PMIB3-HT for Position Sensor PMIS3

- Easy splicing
- Resistant to moisture and many fluids
- Extensive ruggedness against dust etc.
- High temperature durability
- Magnetic scale with stainless steel base

The magnetic material is magnetised in defined and even distances and works as a solid measure. Reference marks can be user defined in 4 mm resp. 10 mm steps. The magnetic scale retains its firmness by means of a spring steel base (stainless steel strip CrNi 17 7).

Specifications		Solid measure	
		Plastic bonded flexible permanent magnet	
Base material		Stainless steel CrNi 17 7 / elastomer	
Masking tape		Stainless steel (non magnetic)	
Measurement ranges		e.g. 100 ... 2500 mm (up to 50 m on request)	
Width		10 mm +0.1 mm / -0.2 mm	
Thickness (with masking tape)		1.7 mm ±0.1 mm	
Magnetic period		2 mm	5 mm

PMIS4, PMIR4 POSIMAG® rotative Magnetic Wheels and Sensors

Magnetic wheels for rotative applications with POSIMAG® Position Sensor PMIS4

- Resistant against shock, vibration, humidity and many liquids
- Robust against dust, swarf
- Multiple diameters and resolutions
- With aluminium carrier

A wheel made of plastic bonded magnetic material is magnetised in defined and even distances. An optional index mark generates an index pulse which occurs once in a rotation. A multitude of diameters, resolutions and mechanical integrations with and without aluminium carrier is available.

Order code wheel PMIR4

Model name

PRODIS-INC

Digital Process Meter

for Incremental Sensors

For POSIMAG® and all ASM Position Sensors and Encoders with incremental output

- Integrated sensor supply
- Counting rate up to 250 KHz (<1 MHz edge freq.)
- 6-digit LED display
- Relative measurement mode
- RS-232 interface
- Optional 4 comparator outputs

Description

PRODIS-INC is designed for use with incremental position sensors to display angles and displacements. The fast counter processes 90° phase shifted A,B signals (quadrature signals) for direction and counting information. Sensor excitation is supplied from the meter.

With four membrane keys all parameters can be programmed for the special application. A zero signal and a reference signal can be used for calibration of the measurement system. Optional comparator functions with 4 NPN open-collector outputs are available, 2 of them also as relay output.

Specifications		
Display		6-digit 7-segment LED, 14 mm high, decimal point programmable
Excitation voltage/current		24 VDC ±10%/150 mA 85-250 VAC, 50-60 Hz/180 mA max.
Counting rate		250 kHz maximum, 1 MHz edge frequency
Sensor excitation		24 VDC/300 mA or 5 VDC/500 mA
Inputs		A, B, Z, T (reference signal)
Connection		Terminal strip 12-pole, excitation 3-pole
Operation temperature		-10 to +40 °C
Storage temperature		-20 to +85 °C
Weight		approx. 250 g
Protection class		Front IP60, back IP40
Humidity		Max. 95% rh, non condensing
Comparator outputs (option)	Relay NPN	250 VAC/5 A, 30 VDC/5 A 24 V max./50 mA to GND
Safety of equipment		Directive 73/23/EWG: DIN EN 61010:1994-03
Electromagnetic compatibility		Directive 89/336/EWG

Order code PRODIS-INC

Model name

Excitation voltage

24VDC = 24 VDC

230VAC = 85 ... 250 VAC

Sensor Excitation Voltage

G24V = 24 VDC

G5V = 5 VDC

Sensor signal

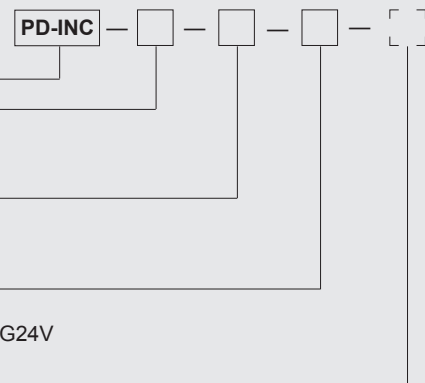

HTL = HTL level with excitation voltage G24V

TTL = TTL level with excitation voltage G5V or G24V

Comparator (option)

REL2 = Comparator

DT = Desktop version

Order example: PD - INC - 24VDC - G24V - HTL

Outline drawing

WS Position Sensors – the functional principle

WS position sensors capture position measurement either absolutely or incrementally, using measuring cables made from stainless steel. Using different constructions, and with measuring lengths of up to 60,000 mm, the ultra-simple, sturdy, space-saving designs make these sensors the ideal basic solution for many length and positional measuring tasks.

WS position sensors comprise the following components:

- A precisely-calibrated measuring cable
- A measuring cable drum
- A measurement shaft
- A spring motor
- An angle sensor element
- Optional sensor electronics.

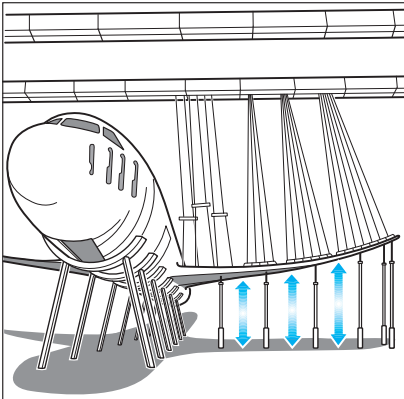

The measuring cable is first wound in tight spiral layers round the drum. To determine the position, the measuring cable is then unwound from the drum against the return force of the spring motor. The unwinding process from the drum converts the linear movement of the measuring cable into an angular movement. This angular movement is then captured using angle sensor elements (encoders or potentiometers) and converted into an electrical output signal.

Analogue output types include potentiometer, 0-10 V, 4-20 mA, analogue derived SSI or a programmable version with span and offset adjustment. Digital outputs include incremental encoder, absolute encoder, SSI, CANopen, Profibus, Interbus-S or RS-232.

Technical advantages:

- Fast and easy to assemble
- Only minimal linear guidance required
- Compact design
- Resistant to vibration and shock
- High protection category to IP67
- Linearity of up to 0.01%
- High measuring speed up to 20 m/s
- Measuring lengths of up to 60,000 mm
- Many output types

Applications for WS Position Sensors

POSICHRON® – the functional principle

POSICHRON® is an absolute, contact-free and wear-free position measuring system. It is extremely sturdy making it suitable even for applications where other measuring principles would fail. The availability of various constructions - rod, square profile and ultra-flat profile - means that the system can be adapted to suit all kinds of installation conditions.

The POSICHRON® linear measuring system consists of a magnetostrictive wave guide and a movable magnet for determining position. The measuring principle of POSICHRON® position sensors is based on two physical effects: the Wiedemann effect and the Villari effect.

To create the Wiedemann effect, a current impulse is sent through the POSICHRON® positional sensor's wave guide. This current impulse generates a circular magnetic field which propagates at the speed of light around the wave guide. If this circular magnetic field makes contact with the magnetic field of the position magnet which is moved lengthways, a torsional mechanical-elastic density wave is triggered at the overlap area of the two magnetic fields as a result of magnetostriction. This wave propagates in the POSICHRON® positional sensor at ultrasonic speed.

The sensor head of the POSICHRON® position sensor contains a detector which detects the arrival of this wave. The magneto-elastic Villari effect is used as the method of detection. The position between the detector coil and the magnet which can be moved lengthways along the POSICHRON® sensor is determined by measuring the time difference between the electrical induction current impulse and the voltage pulse generated via the Villari effect in the detector coil (time-of-flight principle).

This time difference can be converted using various well-known methods into analogue or digital output signals. The time-of-flight signals can however also be evaluated directly by commonly-available interface modules or counter and time-measuring devices.

A separate detailed catalog about POSICHRON® Magnetostrictive Position Sensors is available on request.
